## Caesar Cipher Exploration Questions

You are sending messages to your allies, but you need to keep them secret from your enemies. You encode letters as numbers using:

| A | B | C | D | $\cdots$ | $Z$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 1 | 2 | 3 | $\cdots$ | 25 |

and the numbers are then altered using

$$
\text { Coded }=\left(A^{*} \text { original }+B\right) \bmod 26
$$

## Part 1

You have a coding machine. Your job is to input text, choose values for A and B and then get the coded messages. Good luck!

Code the message given to you by the teacher.

## Part 2

Swap your message and values for A and B with a classmate, and try to decode the message by hand. First you must decide what $1 / \mathrm{A}$ is $\bmod 26$. Then decode using

$$
\text { original }=((1 / A) *(\text { coded }-B)) \bmod 26
$$

Good luck!
