Far Far Away Forest Simulation

Model Description:

This model showcases a simulation between frogs, princes, princesses, and witches. When frogs are kissed by princesses, there is a percent chance of the frogs turning into princes. When princes touch a sleeping beauty, there is a percent chance of the sleeping beauty awakening. When a witch touches a princess, there is a chance that the princess will fall asleep. When a witch touches a prince, there is a chance that the prince will turn into a frog.

This model takes place in an enchanted forest. Many of the features can be manipulated with the input boxes in the model.

How to run the model:

- 1. Set the starting number of each object using the input boxes.**
- 2. Click the “Play” button and watch what happens**
- 3. You can “Stop” the model by pressing the two lines once; this effectively pauses the simulation. To start again press the green triangle once.**
- 4. There is also a “Step” button that can be used to skip through one time step of the simulation.**

Model Functions:

- I. Buttons**
